

**IN THE ABSTRACT:**

Please replace the Abstract with the following paragraph:

A cleaning assembly cleans an exterior surface of a motor vehicle. The exterior surface defines first and second edges. The motor vehicle includes a cleaning fluid reservoir. The cleaning assembly includes a connector for connecting the cleaning fluid reservoir with the cleaning assembly for receiving fluid therefrom. A distribution chamber is in fluid communication with the connector and receives the fluid received by the connector. The cleaning assembly also includes a nozzle fixedly secured to the distribution chamber for disbursing the fluid over the exterior surface. The nozzle includes a nozzle opening that defines a slot opening such that a film of fluid exits the nozzle opening over the exterior surface.
